

# LOOKUP Table

The statement to create table Look-up

```
spark.sql("CREATE TABLE tb_lookup (card_id STRING, ucl  
DOUBLE, postcode STRING, transaction_dt STRING, score INT)")
```

For now, the Look-up table has no data.

```
[>>> spark.sql('SELECT * FROM tb_lookup')  
DataFrame[card_id: string, ucl: double, postcode: string, transaction_dt: string, score: int]
```

]
